EDie:
Uniquely qualified to support the needs of the emergency department

ALL RELEVENT PATIENT INFORMATION DELIVERED IN AN ED ALERT READ IN LESS THAN 60 SECONDS

What is EDie?

EDie is a light-weight, ED-based, collaborative care management tool for coordinating the care of the highest needs patients across a community of providers irrespective of hospital, emergency center, health system or geographic boundaries.

Make rapid, informed decisions for better outcomes

EDie's notifications distill care coordination information, care histories, security events, known care providers, and ED utilization patterns from all EDs visited by a patient, and packages it all up into an alert that can be read in 60 seconds or less. This information is delivered to your ED within moments of a patient registering.

Avoid alert fatigue

The "comprehensive patient record" isn't practical in an ED setting because too much time is required to search and sift through data that may or may not be helpful. EDie takes all of that information and condenses it down to what will help in an ED environment, and then delivers it the instant it's needed.

Avoid unnecessary admissions

EDs on EDie join a growing network of providers instantly collaborating on a shared patient record contributed to by all EDs visited by a patient. This creates a dynamic care coordination environment that ensures that wherever a patient goes, treating providers are operating from the same playbook, every time.

Integrate within existing workflows

EDie pushes notifications by whatever method works best for an organization—fax, network printer, email, text message, or directly into a facility's EHR—ensuring that wherever a patient goes, their care coordination message is delivered with them to the exact location, and in the exact form it is needed, every time.

INTELLIGENTLY-SOURCED INFORMATION AT THE POINT OF CARE

- Care team-provided care plans
- Prescription histories/PDMP data (where available)
- Insights into social determinants
- Utilization patterns
- Advance directives/POLST (where available)
- Security alerts

CollectiveMedical

The Collective impact

After joining the Collective network and implementing Collective EDie, care teams in Washington state saw*:

- 9.9% reduction in overall ED Medicaid visits

- 10.7% reduction in ED use among frequent utilizers

- 14.2% reduction in low-acuity ED visits

- 24% reduction in narcotic prescriptions from the ED

…equating to $34 million in savings in the program's first year.

*Source: The Brookings Institution

Within one year of joining the Collective network, an ACO in the Pacific Northwest saw:

- 15% decrease in avoidable ED utilization

- $6.5 million decrease in total cost of care

ABOUT COLLECTIVE MEDICAL

Collective Medical closes the communication gaps that undermine patient care.

With a nationwide network engaged with every national health plan in the country, hundreds of hospitals and health systems and tens of thousands of providers, Collective Medical's system-agnostic platform is trusted by care teams to identify at-risk and complex patients and facilitate actionable collaboration to make better care decisions and improve outcomes.

Based in Salt Lake City, Collective Medical's technology is proven to streamline transitions of care, improve coordination across diverse care teams, and reduce medically unnecessary hospital admissions.
